

2024 RCAS Winter Meeting | Feb. 5, 2024 | Atlanta, GA

Emerging Technologies and Autonomous Applications in Precision Agriculture

Simer Virk

Extension Precision Ag Specialist
College of Agricultural and Environmental Sciences
University of Georgia

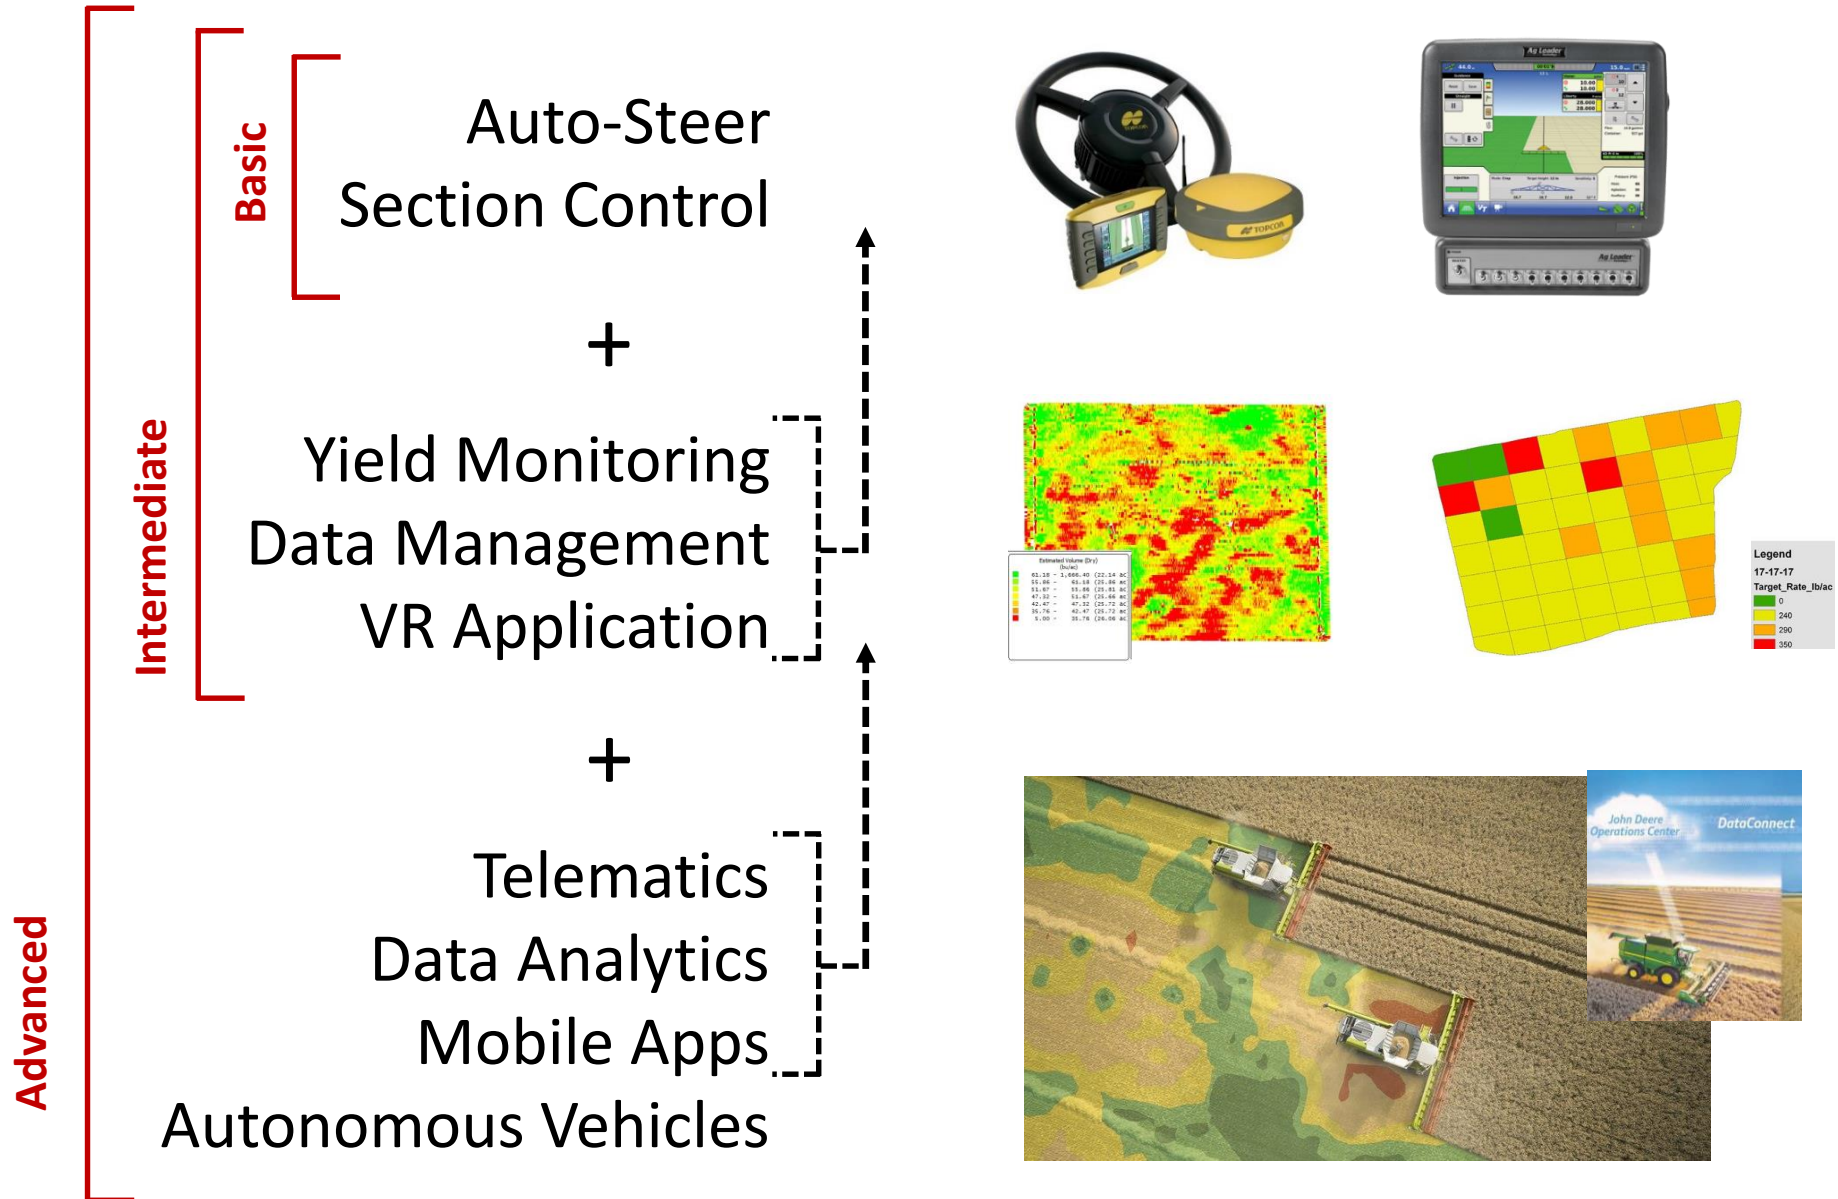

Precision Ag Technology Today

- **Basic PA technology is the Norm**
 - ✓ Auto-Guidance is standard
 - ✓ Section and Rate Control on Planters and Sprayers
 - ✓ Variable-Rate Application of crop inputs
 - ✓ Yield Monitor on Harvest Equipment
- **Growing with technology**
 - Telematics, Data Management & Drones
 - Smart Sensors, Connected Technology & Imagery
- **Future technology potential**
 - ❑ Robotics & Automation
 - ❑ Machinery Learning & Artificial Intelligence

Precision Ag Technology Adoption Levels

Basic Precision Ag Technologies

Guidance & Auto-Guidance Systems

Section & Row Control on Sprayers and Planters

Variable-Rate Application – Fertilizer & Seed

Yield Mapping & Monitoring

Emerging Technologies and Applications

Smart Sensors

Seed Tube Sensor

Smart Sensors

Active Downforce

Precision Planting SmartFirmer

Common Nozzles used for Pest Management

Standard Flat-Fan (XR)

Air-Induction (AI XR)

Dicamba Tip (TTI)

Precision Rate and Droplet Control - PWM Technology

- Constant spray pressure across the boom (droplet size control)
- Flow (rate) changes are accomplished by varying duty cycle

Individual Nozzle Control

- Individual nozzles can turn ON/OFF as they come out of spray and non-spray/already sprayed areas.

- Reduction in over-application and application in environmentally sensitive areas.

Drones

- ***Scouting & Crop Monitoring***
- ***Insurance (crop loss claims, yield prediction....)***

Satellite Imagery

December, 2007

March 26, 2013

April 2, 2023

Aerial Imagery Driving In-Season Crop Management Decisions

June 10 – Before Planting

July 25 – After Planting

October 13 – Before Defoliation

Spray Drones

- **Spot-spray herbicide applications** – where it is efficient and economical to treat with a drone sprayer
- **Fungicide applications** – when a timely fungicide application with a ground sprayer or crop duster is not feasible
- **Awkward acres or small fields** – fields or parts of the fields that makes applications with ground and/or crop duster challenging

“Big Data” in Precision Ag

Planting Metrics: (20+)

- *Population*
- *Singulation*
- *Furrow Quality*
- *Downforce*
- *Seed Spacing*
- *Ride Quality*
- *Closing Pressure*
- *Soil Moisture*
- *Soil Temperature*
-

“Big Data” in Precision Ag

A single field (~30 ac) can have up to 1 TB of data over the full season.

Telematics & Analytics

Wireless Data Transfer & Storage

Telematics & Data Analytics

Web-based and Online Data Management Software's

Connected Technology

***Remotely control
and monitor
machine/equipment
functions!***

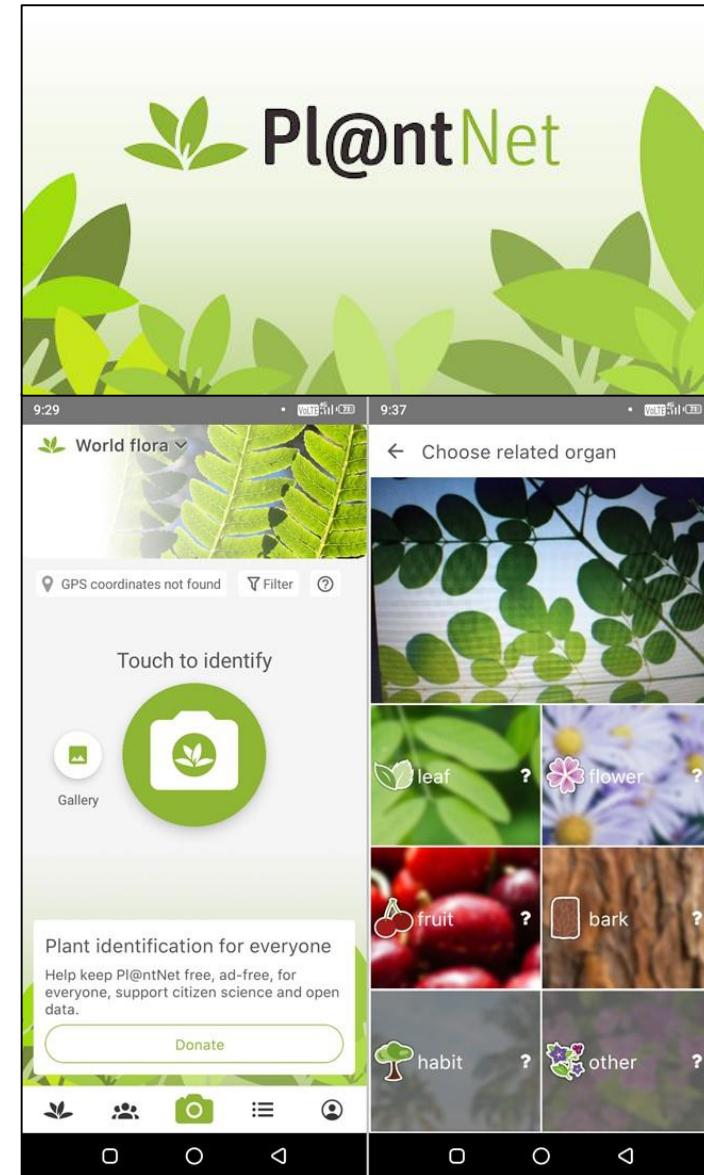

Robotics & Automation

*Semi-
platfo
avail*

Machine Learning & Artificial Intelligence

See & Spray Select: Broadcast and targeted spray on fallow ground (green-on-brown)

See & Spray Ultimate: Targeted spray in the crop (corn, soybean and cotton; green-on-green)

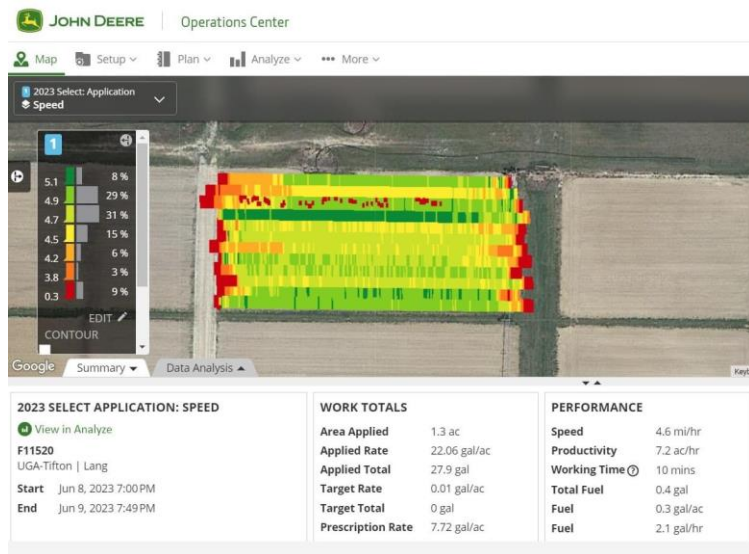

What we can expect in next 3-5 years?

- ❑ **More (small and medium-scale) growers adopting technology**
 - Interest in precision application of crop inputs
 - Need to catch up with technology (late adopters)
 - Technology already integrated into the new machinery
- ❑ **More sensors, technology and data on agricultural machinery**
 - More precise crop input applications
 - Automating machine functions with more connected technology
 - In-field data driving application decisions

Research Centers & Experiment Stations.....

We must adopt and utilize technologies to stay relevant!

Thanks!
